

Roll No. _____

ESSAY

Time Allowed: 3 hrs.

Max. Marks: 250

Instructions to Candidate

- Both sections are compulsory.
- Attempt an essay from each section.
- Each essay carries 125 marks.
- Write each essay in about 1000-1200 words.
- After finishing the first essay, attempt the next on a fresh Page.
- Any page left blank in the answer-book must be crossed out clearly.

(Examiner will pay special attention to the candidate's grasp of his/her material, its relevance to the subject chosen, and to his/ her ability to think constructively and to present his/her ideas concisely, logically and effectively).

SECTION - A

1. Success is not the key to happiness; happiness is the key to success.
2. The starting point for all achievement is desire
3. Quality is pride of workmanship.
4. If you know the enemy and know yourself you need not fear the result of a hundred battles.

SECTION - B

1. The illiterate of the future will not be the person who cannot read. It will be the person what does not know how to learn.
2. Wealth is the ability to fully experience life.
3. Men have become the tools of their tools.
4. Since we cannot change reality, let us change the eyes which see reality.

Remarks

Draw:

① In first essay many things are written with same inference. — i.e. importance of quality

Quality as resource
How some company can produce qualitative products

② need to examine/critically
few aspects: — You can collect many idea to bring better depth.

① why it is difficult to sustain quality.

② How competition shapes quality / example.

③ Role of individual + organisational etc.

These value addition will make this essay a great reading stuff.

SECTION-A

3. Quality is pride of workmanship.

The human endeavour is for survival right from the ancient prehistoric times when he struggled fury of the nature, disability of his cognition and barriers posed by lack of knowhow. It is this necessity to achieve his survival that man's quest for excellence has been driving him to superior quality. It is this struggle of quality which has helped man evolve, adapt, achieve and be his pride for posterity.

The strive for quality is for his desire of an identity which drive a workman to excellence. It is strive for his excellence which builds his capacity. The innovation of a workman makes resource a commodity, a thing to priceless value and rock to a monument. The struggle for quality is too enticing for man primarily as it helps him get the rewards of his hardwork which is implicit in every quality workmanship.

Remarks

Quality being the pride of a workman has been the cornerstone of modern day Technology. It is the huge history and the underlying competition with nature and fellow human beings that has helped achieved man significant milestones in history. The quality itself is the barometre to judge the workman, teacher, professionals by their quality imparted which inculcates value to their effort.

Quality: Human Endeavour.

Man's adaptation to his surrounding has been possible by the quality of his Technology. Agriculture, which signified quality in food gathering was perhaps the pride of those civilizations at that time. Modern day superpowers take arrogance and give other countries cold shoulders primarily on the basis of their superior quality, knowledge, knowlidge, skillsets in their country which creates capability and avenues to deal with challenges.

Remarks

Democracy, as an institution has been a result of huge amount of incremental changes in the political systems from age of monarchs to tyrant feudal lords. The similar analogy can be drawn from the governance system, economic frameworks from primary to tertiary economic activities which enabled quality to be the only judge of workmanship and the degree of quality imparted brought human down to a stable efficient system of functioning.

The bridge in workmanship was enabled by a sound education which got updated from the every passing day. The Renaissance which saw a breakdown of traditional thinking and entering the paradigm of quality seeking socio thinkers, political scientist, artist, liberals seeking and challenging existing knowledge and raising the bars of excellence. It is this quality drive which enabled European countries to colonise their Asian and African countries.

Remarks

Quality: Workman's Identity.

Quality provides identity and differentiates
the legends from ordinary mortals. This
identity can be of as a community or
of an individual. Sportsman, film actors,
media anchors, teachers are perhaps known by
the superior skills which they possess which
gives them an identity which is synonymous to
the quality they provide. The history is characterised
by eras defined by persons who own it.

Community too are perhaps bounded by
this identity notion and strive for quality
in their endeavour. The frameworks are being
evolved worldwide to recognise these quality.
The GI tag, patents, Copyrights are some of them
which help give community the pride in their
quality. The overall quality of life being
taken into by Human Development Paradigm
involves the quality in these social, political
and economic domains which impacts superior
lifestyle.

Remarks

Agencies like NASA, Apple, XEROX, Cadbury have created niche for themselves by the quality of their skills which is the best in the field or the best being defined as what is being done by them. Companies too have realized that its simple evaluating standard is quality. The identity provided to German cars, US Technology, Chinese Infrastructure, Indian diversity is the epitome of quality in various human strives in economic and social fields, which defines them in their own unique way.

Quality: makes things a resource

Quality has been the defining paradigm which created milestones for human civilizations across generations. The discovery of compass and astrolabe changed the way humans navigate, track, draw maps and the way humans looked at the world. The diesel engines have made possible to drive engines of growth which is the pride bearer of humans carrying the glory of his achievements.

You can't
cut few things.

Remarks

The quality of resources having been generated have set the standards of living. The discovery of oil in Middle East and West Asia has transformed deserts into thriving surplus economies. These linkages between resources and their technology too to harness have created a complex web of relationship primarily driven by price each has its endowments. The alternative energy resources and their technology to tap it have created new avenue for countries having raw materials for it.

Quality, which makes goods priceless is evident by the canvas of painting which helps make realise the complex ideas to simplified forms. It is the pride of these artist which helped them to create new norms. This can too be extended to rights framework which helped to generate mobilisation, fight for equality, liberty and create a new framework of values for 21st century which was nothing but strive for excellence,

Remarks

Quality: Reward for workmanship.

It is the research in sciences and medical field which created superior drugs, procedures and medicines to treat the ailments. It is this fight of the few which helped achieved quality of life for all. It is the responsibility of individual institutions to take action and

come up with alternative framework, synthesis methods to deal with problems which humanity faces. The problem of poverty, hunger, malnutrition too needs innovative solutions.

Quality though rewarding has to be realised with minimum inputs of raw materials and environmentally sound. This dimension of environment has created challenges of sustainable development. These challenges which confront us can only be overcome by developing quality technology to deal with degradation of environment and creating respectable living for people in other countries at fringes of humanity.

Remarks

Quality which has been delivering in domains of providing identity to giving the capacity to humans to adapt and survive through ages. It is this struggle and the resources avenues generated by the quality of workmanship which has helped humanity to achieve his economic, social and political aims which needs to be inculcated in human psyche for ages.

Quality to strive for achieving challenges was best summed by Lincoln who expounded that excellence in human endeavours will help realise man his dreams whereas a half hearted work will always make him cope his challenges. This fine distinction of striking a balance of excellence and make it instilled is what makes it a challenge of leaders of contemporary times and as well as for parents towards their children.

Remarks

SECTION B.

2. Wealth is the ability to fully experience life.

The notion of experiencing life has various connotations to various individuals, communities across time and ages. The wealth of spiritualism and moral bond being had been considered necessary for a successful in ancient past to that of material achievement based on a money economy and personal gains has been the dictum in the recent past with high degree of individualism.

Wealth which has elements of experiencing life at all stages of life from childhood, adolescence to geriatric population stage. It is wealth of resources, skills which helps in achieving socioeconomic dreams of the community, nations, globe to help them achieve self reliance and get a quality lifestyle.

The importance of wealth becomes apparent perhaps by the absence of it or the absence of ability to utilise it. Quality of resource, economic values in population and ethical framework which too is a wealth of people which helps face crises.

Remarks

Wealth which helps experience life to the fullest with the intensity increasing with increasing wealth and passing time. It is what that empowers to experience joy, hedonism, gain experience, travel and realise dream which is achieved by wealth of money, resources. wealth in content of values, health, familial bonds, simplicity is what the people of the yore used to consider which though have now showed its importance by the absence of it.

Wealth and ability to experience life.

Wealth is definitely necessary which helps individuals across his lifetime. The role of wealth is significantly important in the childhood ~~wherein~~ the future of a child is dependent on education, nutrition, upbringing and values which are inculcated in the very nascent stages of life which empowers him and deficiency at this stage keeps him disabled for the future or rest of his life depending upon severity.

Remarks

Wealth as ability to experience life is most relevant in the youth and ~~and~~ ~~life~~ ~~when~~ the man having set his life can venture to achieve his dreams of hedonism, travel, materialism, luxury which are realised by wealth. The wealth of familial ties and bonds helps man to get the content of ~~seeing~~ parenthood and see his children and old parent spend their life with ease which is the most satisfying as a human to see man devote to his dependents by the wealth.

Old stage of his life is where the wealth again helps him to tide his medical disabilities, social security and ~~live~~ ^{live} an anxiety free life which is possible by wealth. The wealth of his children and grandchildren is what helps him to overcome his loneliness and cherish his sunset years. Life of wealth driven only by materialism may be looking promising in the short run but it may not be the case in hindered course of future.

Remarks

Wealth to achieve dreams:

Wealth is the most important resource to be generated by the nations, community to help realise their socioeconomic goals and happiness. It is this resource which helps state to achieve decent incomes, food security and delivery of basic services. It is these supplementary services and goods provided by state which makes life more relevant and meaningful. It is wealth creation by means of economic activity, exports, wealth generation by value addition of goods by skillsets.

The quality of life experienced sees a major divide across the western and oriental countries. It is this difference wherein western countries high on wealth resources clearly co-relates their high standard of living. The high per capita consumption of resources, wealth, income and economic activity by global GDP helps in realising their quality of life wherein the developing eastern countries challenged by wealth experience poor life.

Remarks

The wide inequality in distribution of resources is too evident in distribution of quality of life in developing countries. The high inequality makes this vulnerability far grave with the poor sections just making their ends meet. The inability of poor to get educational, material, skillset, familial life and other parameters of wealth is what makes their life challenging and with challenges confronted for survival.

Life in Absence of wealth:

It is the absence of wealth which makes the realisation of impact of wealth on human life quite relevant. The slums and squatters, urban ghettos in developed interstices of built-up areas have life marred with poverty, disease, malnutrition, crime, alcohol abuse etc. This absence or perhaps limited wealth of health, nutrition, income, drinking water and sanitation makes the case quite strong for wealth's role in experiencing human life.

Remarks

The countries which were sucked off their wealth by imperial countries in the past still lag in developmental goals. The case of Africa is perhaps quite relevant here.

The countries of China, India had suffered for decades with their drain of wealth which made them crippled and resource scarce which were extremely vulnerable when their independence was realised. The absence of wealth in earlier past still has imprints now.

The quality of life in difficult terrain of mountains, swathes of deserts, arid regions, inaccessible terrains still sees life in primitive stages with wealth being scarce and harsh climate limiting life experience. The natural control of man's life is quite evident here as it is this wealth scarcity which is further aggravated by disasters, calamity which further drives man to the edges. It is thus the absence of wealth which makes a strong case for its role on life.

Remarks

Wealth in alternative domains:

Wealth role on human life is not limited to economic parameters alone rather the social, ecological, spiritual wealth which also help man to realise happiness. This can be evident as maximum suicides are seen in urban areas among the youth which are to be associated with high wealth and resource at their disposal. The rural lifestyle though not economically strong but the contentment with ecological, social and spiritual elements is what helps them experience a peaceful life.

The excessive importance to materialism, consumerism, relations being turned into a formality which made it difficult to experience life rather created a race to sustain life. This has created disillusion, hopelessness, depression among people who by reasonable standards are successful but lack emotional nurture, value based learning and absence of life skills teaching at schools. The wealth of maintaining emotional balance and life skill to experience happy life.

Remarks

It is the wealth which helps man creating abilities at different stages of life and cherishing the life to the fullest. The wealth in national realm too helps in creating an environment for achieving goals of collective nature which helps in rebalancing inequality. The role of wealth being evident in the absence of it which is relevant across regions and countries.

Wealth in experiencing life is not only being constrained to economic domain but elements of social, ecological and spiritual elements. The role of these were expounded by Gandhi in his Gram Swarajya model of Sarvodaya which encompassed these realities and tried to make life relevant within domains of wealth with focusing on need and not greed. It is this holistic and multiple notions of complex interlinking aspects of wealth which makes life worth experiencing.

Remarks

- ① Arrangement & flow is not good
- ② First you need to take a wider view about wealth.

with detail explanation & illustration

then start talking various dimensions — discussions etc.

in the initial ~~part~~ ^{part} of your writing — much focus has been given to resource aspect

you can cut it short & make space for other dimensions.

good clarity needed
